- BrightSign HDx22

Minimum Firmware Required: 5.1.16

Help and Feedback

If you would like to learn more about the new BrightAuthor features described below, please download the [User Guide](#). If you are new to BrightAuthor, you can also visit the [Tutorial Videos](#) page. If you have any questions, please contact us at support@brightsign.biz.

Changes Since 4.3.0.6

New Features

- **Enable variable logging** option in the **BrightSign Unit Setup** window
- **Start Index** option for Images List, Video List, and Audio List states
- Support for the HD922 and HD972 models

Bug Fixes

- A presentation will no longer crash if it begins with an Image List state that has the **Populate from data feed** option enabled.
- A Media RSS Feed state that points to an empty MRSS feed will no longer halt presentation playback.
- The **Validate** action no longer fails when used with Networked User Variables and BSN Live Media feeds.
- Portrait mode presentations no longer fail on LSx22 and HDx20 models. For these models, selecting Portrait mode only changes the BrightAuthor UI; you will still need to rotate the content using your authoring tools.
- BrightAuthor no longer crashes if you use the **File > Replace Media Files** option with a playlist containing a large amount of media files.
- Closing the completion notification after successfully publishing to local storage no longer causes an assertion failure.
- The ordering arrows in the **File > Presentation Properties > Variables** window now display consistently.
- Audio In states can now be pasted into Audio Only zones.

Improvements

- Live Text states now support video content via the **Media RSS Feed** item type.
- Adding an Audio In state now only clears video assets if they are in the same zone.
