- BrightSign HDx22

Minimum Firmware Required: 5.1.16

Help and Feedback

If you would like to learn more about the new BrightAuthor features described below, please download the [User Guide](#). If you are new to BrightAuthor, you can also visit the [Tutorial Videos](#) page. If you have any questions, please contact us at support@brightsign.biz.

Changes Since 4.3.0.11

Bug Fixes

- It is now possible to upload a "Regular" BrightWall presentation to BSN if the BrightWall playlist was automatically populated (i.e. using the "file_1", "file_2", "file_3" method).

- Selecting **File > Exit** while in the **Publish** tab no longer causes BrightAuthor to crash. This bug only occurred if the **Show Save Schedule dialog** box was checked in **Edit > Preferences > UI**.
- If a presentation has an Interactive Menu state within a Super State, and that Interactive Menu state contains a Menu Item that links to a media state outside the Super State, then opening the presentation will no longer cause the Menu Item to disappear.

Improvements

- The **Force Resolution** box in **File > Presentation Properties > Main** is now checked by default to match the resolution forcing behavior in versions of BrightAuthor before 4.3.0.x. This change will apply to fresh installs and updates from pre-4.3.0.x versions; if you are updating from an earlier version of 4.3.0.x, your current preference will be preserved.
