

BRIGHTAUTHOR RELEASE NOTES

Version 4.7.0.8

BrightAuthor Requirements

- PC with Windows Vista, Windows 7, Windows 8, or Windows 10—plus Microsoft .Net Framework 4.6 or later
- BrightSign XTx43, XDx33, HDx23, LS423, HO523, HS123

Minimum Firmware Required: 6.2.39

- BrightSign 4Kx42, XDx32, XDx30, HDx22, HDx20, LSx22, AU320

Minimum Firmware Required: 5.1.33

Changes Since 4.6.0.36

Important: *BSNEE 4.4 does not support the "Match All Media Tags to Player Tags" option for Tagged Playlists with this version of BrightAuthor. This option will be supported in the next version of BSNEE.*

New Features

- New audio-routing options in the **File > Presentation Properties > Audio** tab: These allow you to mix multiple audio sources of different sampling rates and normalize volume levels from multiple audio sources.
- New **Full resolution graphics** option for some 4K modes
- Feed download progress: The **Manage** tab now displays a download status for each file in a Dynamic Playlist, Tagged Playlist, or MRSS feed.
- New User Variable state for Ticker zones

Improvements

- You can now switch portrait presentations between **Bottom on left** and **Bottom on right** in the **File > Presentation Properties > Main** tab.
- If the **Enable native video plane playback** option is enabled for an HTML5 state, the view mode for HTML videos will now default to scale-to-fill.
- HTML sites now support wildcards in the **URL** value (e.g. "http://www.\$\$my_variable\$.com").
- Using the **Filter by playlist name** option in the Local Playlist state now only returns players that are currently using the specified playlist.
- If the content-download process is interrupted, the player no longer waits 5 minutes (in BSN) or 15 minutes (in BSNEE) to resume downloading.
- Player logs that cannot be uploaded now last on the player for 30 days (the previous interval was 10 days).
- The 800x1280x60 video mode is now available for HDx23 presentations.
- Presentation Preview is now disabled for portrait presentations.
- The BrightAuthor autorun now supports uploading Remote Snapshot images to a Simple File Networking server.
- The Scrolling option for Ticker zones is now available for LS422 presentations.
- The following video modes are now supported in BrightAuthor presentations: 1024x768x75p, 1280x720x24p, 1280x720x23.976p.

- 4K1142 presentations now support the following refresh rates for the 4096x2160 resolution: 23.976p, 25p, 29.97p, 30p, 50p, 59.94p, 60p.

Bug Fixes

- A BrightAuthor presentation that contain Tagged Playlists now correctly reports how the presentation will change when you edit tags in the BSN WebUI.
- Buttons in the following states are now visible with PC screen resolutions smaller than 1920x1080: Image Play File, Audio Play File, Video Play File, Image List, Audio List, Video List, and Media List.
- The **Device Setup** window now has scrollbars for smaller resolutions.
- When an Audio Only Dynamic Playlist is used to populate an Audio List state, the presentation now correctly reports the names of the files played to the BrightSign Network.
- Incorrectly specifying an RSS (text) feed as an MRSS feed no longer prevents all other MRSS feeds in the presentation from updating.
- If images are added to a folder that is currently selected for an open Image List state, BrightAuthor will no longer raise an erroneous image size notification.
- The Remote Input event is now available for the XD233 presentations.
- When a presentation is scheduled in a time slot that another presentation was removed from, BrightAuthor will no longer raise an erroneous **Schedule Conflict** window.
- A presentation that is dropped on the interrupted schedule column will no longer be set to the wrong date.
